**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Dennis Carmen on October 9, 2003.

The application has been amended as follows:

Cancel claims 19-70.

***Examiner's Statement of Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

In view of properly filed Terminal Disclaimer on 7/13/2003 obviousness type double patenting rejection over what is now US Patent 6,610,772 to CLAUDBERG et al. is hereby overcome.

The prior art of SCHMIDT (WO 99/38914) in view of MAXFIELD (US 5,385,776) prior art of SCHMIDT disclosed oxygen-scavenging system in polyamide, which composition was utilized in formation of packaging product. The prior art of MAXFIELD disclosed polyamide nanocomposite composition. The rejection was overcome by an amendment and affidavit under rule 131 or 132, which affidavit disclosed that the present invention has been reduced to practice before August 5 1999, which is a publication date of the prior art of SCHMIDT.

During updated search, the examiner found prior art US 6,391,449 to LAN et al, with priority date of December 7, 1998. The prior art of LAN discloses polyamide nanocomposite comprising up to 25 wt % of silicate with additives such as oxygen scavengers, antioxidant and photoinitiator. The prior art of LAN does not specifically list any oxygen scavenging system. It is examiner's position that the list of the scavenging system in the present claim 1 is not obvious over mere recitation of oxygen scavenger. Since claims 30-70 have been canceled the rejection has not been applied.

Applicant's request for rejoinder of article claims 19-29 is also denied for following reason. The allowable subject matter of claim 1 of the present invention is composition

Art Unit: 1714

comprising at least one polyamide, oxygen scavenging system as defined in claim 1 and silicate all in one. The article claim separates the composition into layers wherein one layer contains at least one polyamide and silicate and the second layer contains polymer and oxygen scavenging system. None of the layers of the article comprise all the components of the composition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
